EXECUTIVE SUMMARY

Information Technology graduate and aspiring Java backend developer with hands-on experience building Spring Boot applications and full-stack projects. Passionate about writing clean, reliable code and solving real-world problems, and eager to learn AI technologies while growing in a collaborative engineering team.

TECHNICAL SKILLS

Languages
Java, SQL, HTML5, CSS3, Java Script

Databases
MySQL, Relational Database Design, Stored Procedure

Backend Frameworks
Spring Boot, Spring MVC, Spring Data JPA, RESTful Web Services, HTTP Protocol

Developer Tools
Git, GitHub, Postman API Testing Tool

Security & Auth
Spring Security, JWT (JSON Web Tokens) Authentication, Role-Based Access Control (RBAC)

AI/ML
Python, RAG, LLM APIs, Prompt Engineering, Embeddings, Vector Search , LangChain

Frontend Technologies
React, Responsive Design, State Management, Fetch API & Axios

INTERNSHIP EXPERIENCE

GT Software, *Java Full-Stack Developer Intern* Coimbatore

- Architected, developed, and tested scalable RESTful API services using Java and Spring Boot to support web application requirements.
- Integrated ReactJS interactive frontend components with Spring Boot backend services via structured JSON payload transfers over HTTP/HTTPS protocols.
- Designed and optimized relational database schemas in MySQL, implementing efficient data indexing, storage, retrieval, and automated CRUD functionality.
- Enforced Object-Oriented Programming (OOP) design patterns and SOLID principles to build reusable, clean, and easily maintainable backend software components.
- Conducted systematic debugging and troubleshooting across backend API layers, database queries, and client-side web application code using Postman and browser developer tools.

PROJECTS

Bison DeepCleaning, *Full-Stack Web Application*
Technologies: Java, Spring Boot, Spring Security, JWT, ReactJS, MySQL

- Engineered robust RESTful APIs with modular architecture using Spring Boot controllers, business service layers, and Spring Data JPA repositories.
- Implemented stateless security mechanisms using Spring Security and JWT (JSON Web Tokens) for user authentication and authorization across protected API endpoints.
- Designed and integrated Role-Based Access Control (RBAC) to govern granular user permissions for registered clients and system administrative dashboards.
- Integrated automated email notification services triggered by real-time application workflow events such as user signups and booking confirmations.
- Enforced comprehensive form validation and client-side error handling to deliver a responsive, intuitive interface tailored for desktop and mobile devices.

Company Document Chatbot, *(RAG)*
Technologies: Python, Gemini API, ChromaDB, Streamlit

- Built a Retrieval-Augmented Generation (RAG) chatbot that answers questions from a company PDF, using only the document's content.
- Extracted text with PyMuPDF, split it into chunks, generated embeddings with the Gemini Embedding API, and stored them in ChromaDB for semantic search.
- Retrieved the top 3 relevant chunks per question and sent them to a Gemini LLM with a strict prompt, so out-of-scope questions get "I don't have that information" instead of a made-up answer.
- Displayed source page numbers with each answer in a Streamlit chat interface with session history.

EDUCATION

B.Tech in Information Technology, *Sri Krishna College of Technology* 2022 – 2026 | Coimbatore
CGPA: 6.82/10

Secondary School Leaving Certificate (SSLC), *St. Joseph's Matriculation Hr. Sec. School* 2019 – 2020 | Perambalur
Percentage: 70%

Higher Secondary Certificate (HSC), *St. Joseph's Matriculation Hr. Sec. School* 2020 – 2022 | Perambalur
Percentage: 67%

LANGUAGES

- Tamil
- English

AREAS OF INTEREST

Areas of Interest: Java Development, Artificial Intelligence, Web Development, and Problem Solving.
